

parentTerm

- | | |
|--|--|
|  actin filament organization |  mitotic cell cycle |
|  ATP metabolic process |  mRNA splicing, via spliceosome |
|  cell population proliferation |  multicellular organism growth |
|  cellular response to DNA damage stimulus |  negative regulation of apoptotic process |
|  chromatin organization |  negative regulation of phosphatase activity |
|  chromosome segregation |  positive regulation of collagen biosynthetic process |
|  circadian regulation of gene expression |  positive regulation of viral genome replication |
|  intracellular protein transport |  protein folding |
|  isotype switching |  protein stabilization |
|  meiotic cell cycle |  regulation of cell motility |
|  microtubule-based movement |  regulation of cell shape |
